USBIO.dll	2015/5/5 下午 06...	應用程式擴充	279 KB

Step2

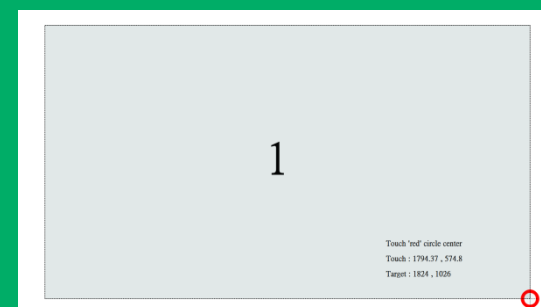

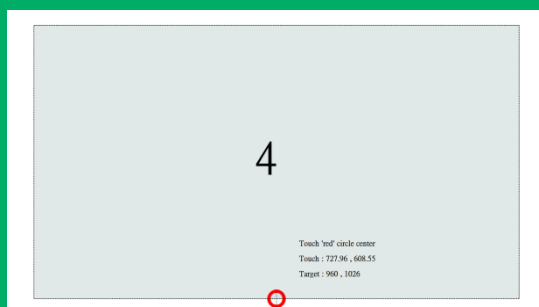

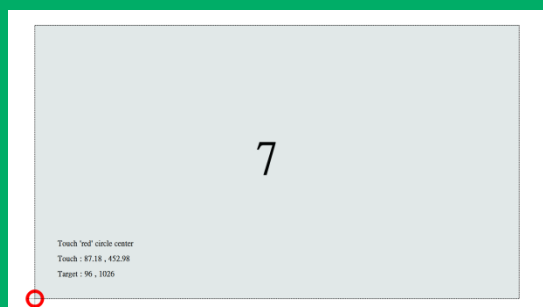

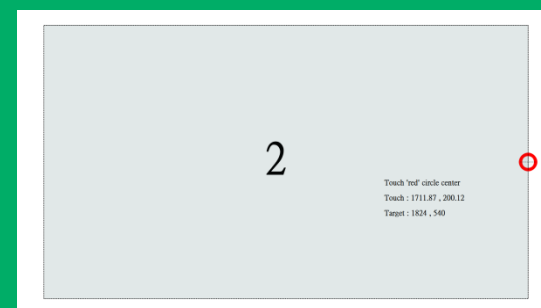

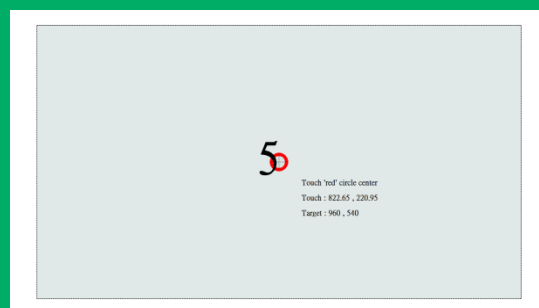

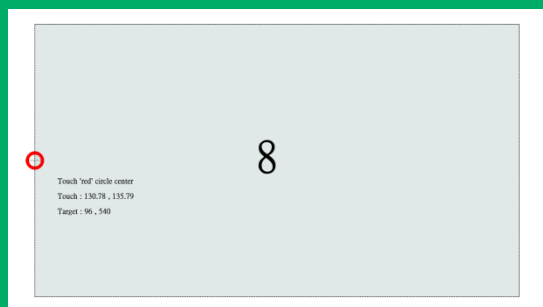

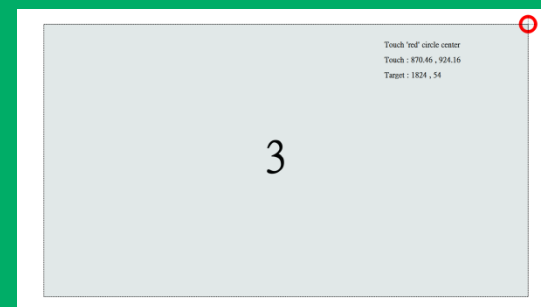

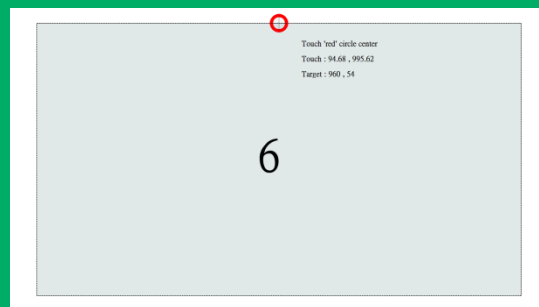

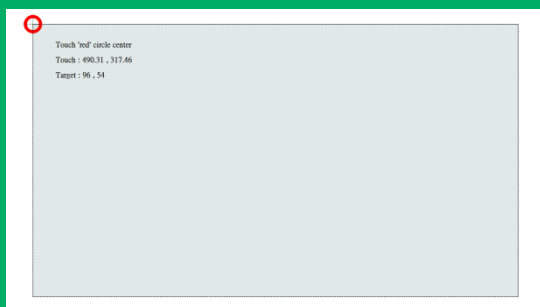

2. Tocar num ponto para iniciar

Please touch 'any place' to initial...

10

Step3

3.Proceder como solicitado até ao passo 9

Step4

4. Tocar em "EXIT" para Atualizar a posição do Touch

Please touch BUTTON to 'EXIT' or 'RETRY'

Point[1] : target(96 , 54) Touch(130 , 135)

Point[2] : target(96 , 540) Touch(87 , 452)

Point[3] : target(96 , 1026) Touch(94 , 995)

Point[4] : target(960 , 54) Touch(822 , 220)

Point[5] : target(960 , 540) Touch(727 , 608)

Point[6] : target(960 , 1026) Touch(70 , 924)

Point[7] : target(1824 , 54) Touch(111 , 200)

Point[8] : target(1824 , 540) Touch(1794 , 574)

Point[9] : target(1824 , 1026) Touch(1748 , 968)

The screenshot shows a light gray interface with a list of points and their corresponding touch coordinates. On the left, there is a green square button labeled 'EXIT' with a blue rounded rectangle around it. On the right, there is a blue square button labeled 'RETRY'. The text 'Please touch BUTTON to 'EXIT' or 'RETRY'' is centered at the top. Below it, there are nine lines of text, each representing a point and its touch coordinates. A green circle highlights the number '0' in the touch coordinate for Point[6], which is 'Touch(70, 924)'. The 'EXIT' button is highlighted with a blue rounded rectangle.

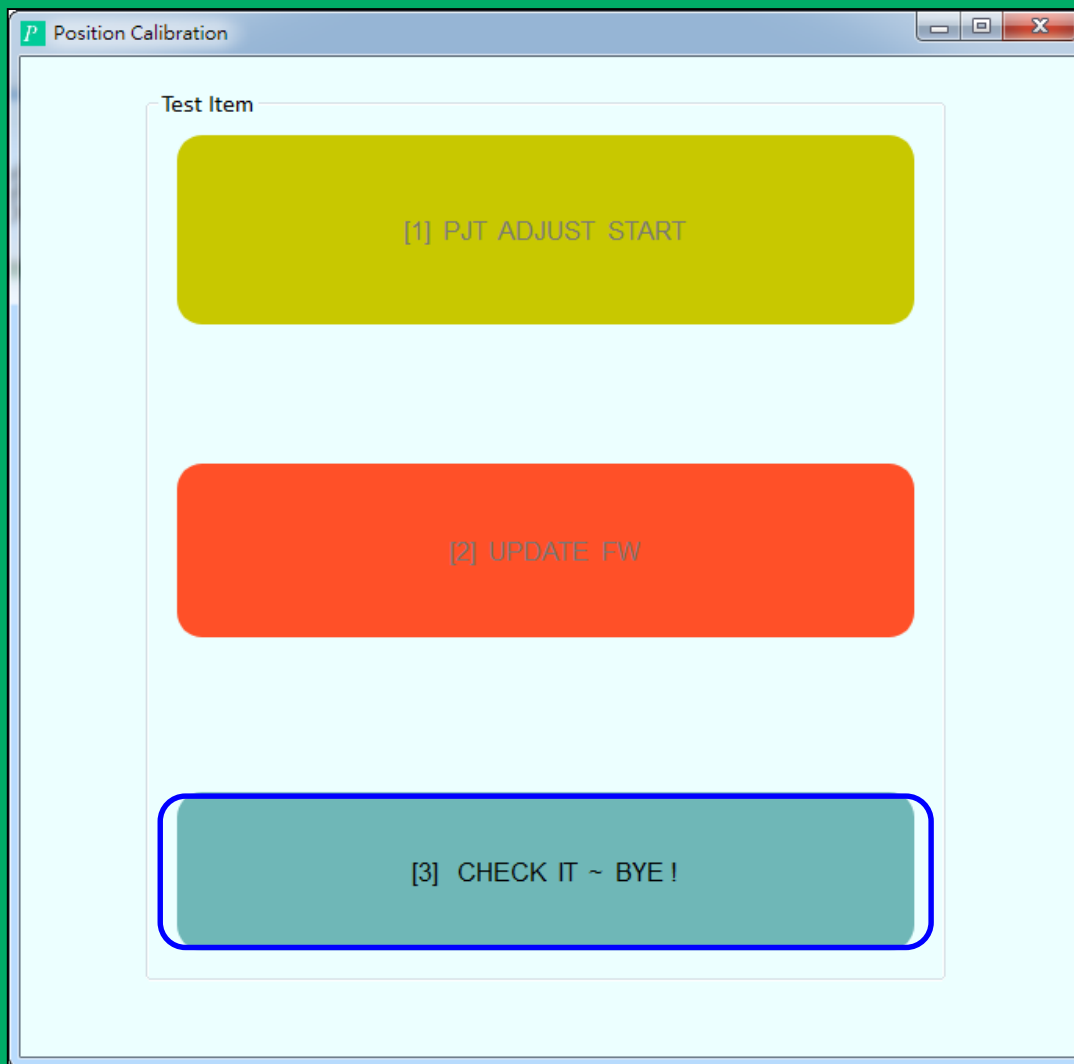

Step5

5. Atualização OK !

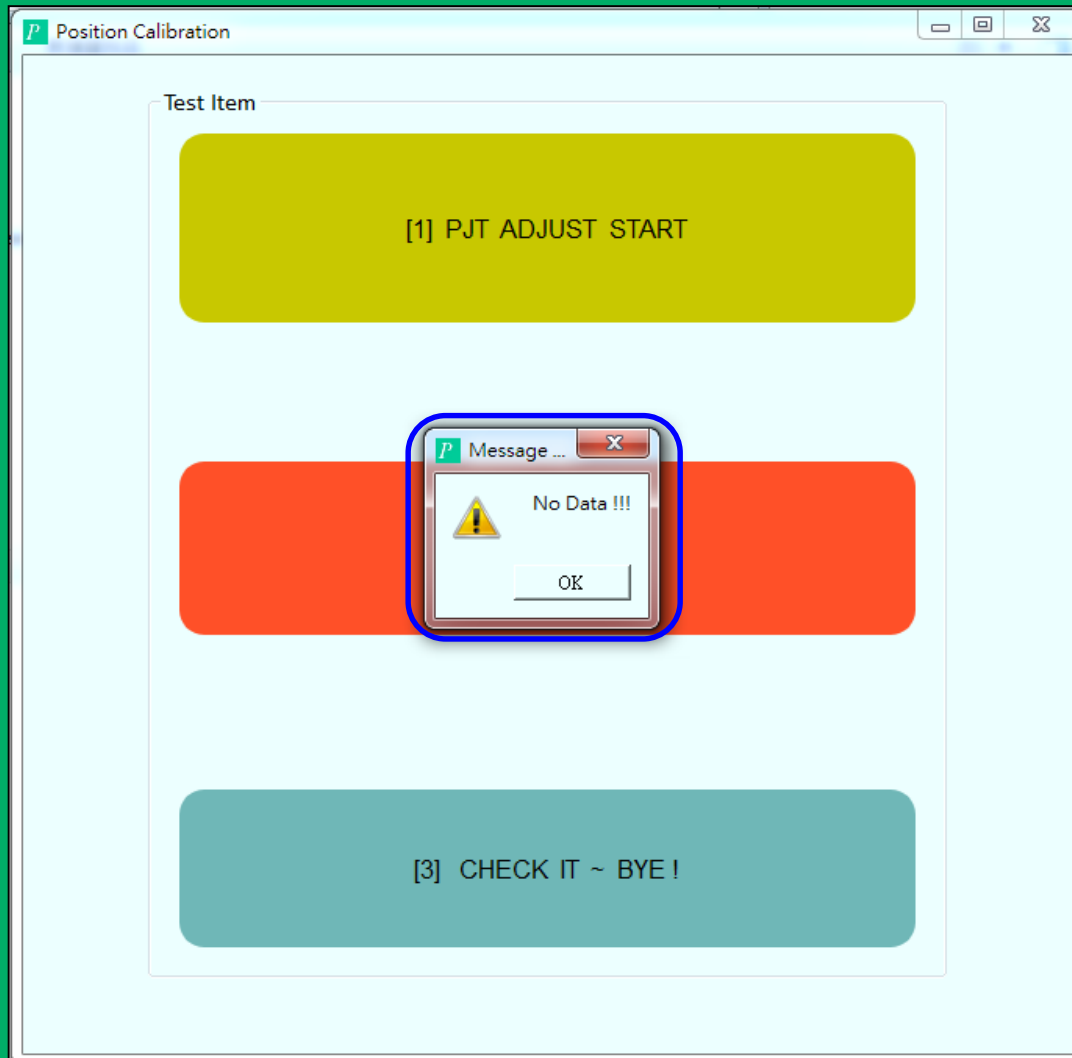

Step6

6.Toque em "CHECK IT ~ BYE" para terminar

Note1

Para corrigir a correção do algoritmo, é necessário coletar 9 pontos de coordenadas para atualizar corretamente o FW, caso contrário, aparecerá "No Data".

Note2

Atualmente, o intervalo de correção aceitável está dentro da faixa de quatro cantos da tela de projeção $(\text{ScreenH ou ScreenW}) * 2/9$, independentemente da forma.
